

PostgreSQL using pgsql shell

Open pgsql :>

You will see Server [localhost]: \$ press Enter no need to enter
Database (postgres): press Enter
Port [5432] press Enter
Username [postgres]: press Enter
Password for user postgres: enter password,
(password ~~will~~ will be hidden)

then if everything is right you will connected to postgres database.

Some pointers →

postgres=# accepts new commands

postgres -# this means you have not added semicolon
in the previous statement.

Note: `postgres=#` indicates your current database.

② For creating a new database, enter following command :-

postgres# =CREATE DATABASE mydb; . after semicolon press enter.

③ For ~~change~~^{switching} to different ~~a~~ database.

postgres#=\c mydb; ~~small~~ lowercase c.

④ To list all the databases ↗

postgreSQL>\l
here do not add semicolon to list all the databases.
Here l is lowercase.
